= Missing product info for that year.

From Centuri Memories website (<http://pionet.net/~dholvrnsn/miniline.html>) : The original Centuri Mini Motors were 2.5" long, 13mm in diameter, and were apparently of Centuri's own manufacture. The line started at 1/4A4, included 1/2A4 and A4 motors, and went all the way up to a full B4. The B4's proved to be CATO prone and were soon dropped. After the B4 was dropped, Centuri mini motors were shortened to a more standard 1.75"/45mm length, and were apparently manufactured for Centuri by Estes. Mini Line kits then came with adaptors to accept the shorter engines.
